Visual Speedware

Enterprise Client/Server Development

Develop Enterprise Client/Server Applications Quickly and Easily

Visual Speedware significantly simplifies application development by integrating the creation of client and server application components into one process, using one familiar tool based on Visual Basic. Visual Speedware's page wizards help save time by completely automating the creation of forms for data manipulation tasks. Visual Speedware automatically generates all of the code you need to create and execute a client/server application.

Benefit from a Powerful and Scalable Run-Time Environment

Visual Speedware maximizes data access efficiency and business logic partitioning with its server-based high-level scripting language that allows the application to access data on the server, as opposed to having it transferred to a PC, as would be the case with ODBC, ADO and JDBC. This allows for optimal network usage.

Visual Speedware lets multiple developers simultaneously create HP-UX, MPE/iX and Windows applications.

The Flexibility of Visual Basic with Speedware's Robust Server-Side Technology

By integrating server-side development directly into Visual Basic, Visual Speedware offers a familiar, comprehensive working environment for all phases of enterprise client/server development and deployment. It also offers complete integrated application security, which is critical to enterprise applications but is often missing from popular low-end development tools.

Visual Speedware Features

Single, comprehensive environment. Integrates the server-side strengths of Visual Basic with Visual Speedware's powerful server-side technology.

High-level scripting language. Visual Speedware's high-level scripting language is designed to all but eliminate redundant coding.

Multi-developer development environment. Client/server development environment is integrated into Visual Basic, creating a powerful enterprise application development tool.

Auto-deploy. Visual Speedware automatically ensures that you are running the latest version of your applications and automates the deployment of your applications to client machines, alleviating the need for version deployment control and practically eliminating deployment costs.

Built-in reporting tool. Included is a report editor that lets you automatically extract data, design the report layout and produce dynamic content-rich reports.

Unique distributed-computing architecture. Visual Speedware's architecture allows you to link applications to today's latest client and server technologies such as web-services, Microsoft .Net, XML, SOAP and Java's J2EE.

Enhance the interface of your legacy applications. By adding a Visual Basic front end to your legacy applications, you can extend their life and value.

Easily migrate V7 applications. Wizards automate the migration of your V7 applications, including screens, reports and other sections.

About Speedware

Speedware Corporation Inc. (TSX: SPW) is a leading provider of application development technology, business intelligence software and wireless Internet solutions. With headquarters in Montreal and a distribution network spanning 35 countries, Speedware offers market leaders the end-to-end solutions they need to enhance their competitive advantage.

Celebrating over 25 years in business, Speedware provides professional consulting services and award-winning support to ensure its customers' ongoing success.

Visual Speedware Enables...

- **Versatility and Scalability:**
Build the Windows client/server applications you want with the enterprise features and technology you need.
- **All-in-One Development Environment:**
Generate all necessary components for a complete application from one product — including forms, reports, batch processing, menus, security, and much more.
- **The Elimination of Deployment Costs:**
The auto-deployment feature saves you from having to manually distribute client and server components to the machines running the applications.
- **Automated Code Generation:**
Visual Speedware automates a significant portion of the development. It allows you to create entire client/server Visual Basic applications without the need to write a single line of Visual Basic code.
- **The Extended Value of your Legacy Applications:**
Extend the life of your applications by quickly enhancing them with a graphical front end.
- **Cost Effectiveness:**
Quickly and easily develop enterprise-level client/server applications for your business.
- **Rapid Application Development:**
Enjoy the efficiency of a distributed multi-developer platform for HP-UX, MPE/iX and Windows.
- **Optimal Network Usage:**
Allows the server engine to locally interact with your data — reducing network strain.

Environments

Visual Speedware uses Microsoft Visual Basic with data objects bound to a high-level server-side scripting language, allowing you to create content-rich and powerful enterprise-level applications. It is the perfect complement to other technologies such as Microsoft C#, Java's J2EE, XML, SOAP, web-services, and more.

Platforms

Visual Speedware is a Windows-based VB Add-in with a server-side high-level scripting language with support for HP-UX, MPE/iX and Windows servers.

Databases

Supports native access to Oracle, SQL Server, TurboImage/XL, HP Eloquence, Omnidex, Omni-Access, DB2, Informix, Sybase, KSAM, CISAM, flat files, and a variety of other file systems through ADO and ODBC.
